

2021 Year in Review

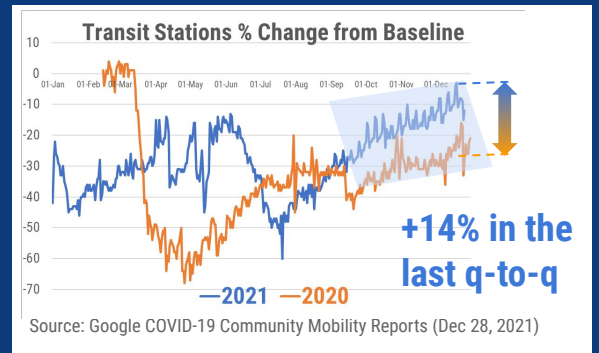

Threat of the Pandemic

To this date, there are already more than 4.2 million confirmed cases in Indonesia, while the vaccination rate has only reached **57%** or more than 158 million people. Yet, it is an opportunity to revitalize national health system in the country.

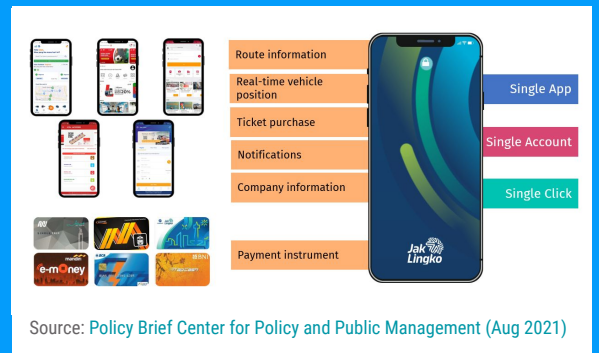

Global Mobility Change

As commuters increased by **14%** over the last quarter compared to previous year, there are plenty of opportunities arise. High technology adoption will become the trend in Indonesia, supporting the presidency of the G20 summit in 2022.

Accelerated Digitalization

Some examples include digitalization of gas infrastructure that can improve the utilization up to **14%**, and JakLingko as the first Mobility as a Service (MaaS) app in Indonesia that can integrate digital payment in using public transport.

Energy Transition

The economic development relies on the transition to affordable-renewable energy, including electricity market reform to enable corporate renewable procurement and the growth of EV industry. Those sectors are supported by the growing concept of ecosystem-based business and circular economy.
